

Stromme Aquaclean HD

Product No. 3205-10100

Page 1 of 1

Stromme Aquaclean is a well known, tested and effective product for the cleaning of the cargo holds, developed from the wide experience of Stromme staff involved in cleaning operations of cargoes carried as dry bulk including those classified as 'oily' e.g. petcoke.

Stromme Aquaclean is a heavy duty alkaline cleaner that contains selected synthetic detergents, wetting agents and foaming agent.

The dense foam that is formed on bulkheads ensures extended contact time for the cleaning solution on the cargo deposits, resulting in reduced cleaning times and product consumption.

When to use

Stromme Aquaclean is a cost effective, eco-friendly, heavy duty cleaner, effective for all dry cargo's including:

- Petcoke (Green Delayed, Calcined)
- Coal and ores
- Fertilizers
- Bauxite
- Wood products
- Animal and fish products.

If Stromme Holdcoat is used Aquaclean can also be used to remove the barrier coating. The product will also reduce the acidity created when washing down after Sulphur cargo residues.

Technical data

- Water based liquid
- White but becomes transparent when drying
- Biodegradable, non harmful to the environment - meets Marpol Convention MEPC 63, Annex 5
- Non-flammable
- pH 13,6
- Flashpoint >100 c
- Free from hydrocarbon solvents.

Storage

Stromme Aquaclean should be stored between 0°C and 35°C in closed containers (without exposure to ambient air). If exposed to freezing temperatures the emulsion may separate in the pail and therefore need stirring after re-heating before use. Upon application the water evaporates and the Aquaclean is less sensitive to temperatures in excess of the specified range.
